AUGER FILLER CONVEYING SYSTEM

SPECIALLY DESIGNED TO PROVIDE MATERIAL LOADING OF AUGER FILLER MACHINES.

The Pneu-Con vacuum loading system conveys material from silos, bag dump hoppers, drums, gaylords or other source to the inlet opening provided on any auger filler machine; automatically maintaining material at a constant level.

Used primarily in the food, chemical pharmaceutical and cosmetic industries, auger fillers provide economical and reliable dispensing of a wide variety of products. Pneu-Con Auger Filler Conveying Systems take economy and reliability one step further, working with auger fillers to produce durable, reliable and efficient one man operation.

RUGGED, SANITARY CONSTRUCTION

Standard Pneu-Con construction is aluminum—seal welded, ground smooth and bead blasted. Stainless steel construction with special finishes or design criteria is available as an option.

SPECIAL FEATURES

Capacities: to satisfy all standard units.

Filters: provide conveying air filtration. Washable pleated filter cartridges are standard. Special types of filters are available as an option.

Transition: provided from receiver to inlet of filler.

Power Unit: Standard power unit is a positive displacement vacuum producer.

ADVANTAGES

- Eliminates the need for hand loading, saving time and money
- Easily maintained components
- Dust-free operation
- Fully assembled for easy installation
