

The Rapid-Dry™ System accelerates the material drying process and provides a more consistent drying method. The Rapid-Dry™ System circulates and re-circulates material on a pre-programmed timed interval. This enables material to constantly pass through the optimum drying regions of the drying hopper. An added benefit to this system is the ability to use a smaller capacity hopper.

The Rapid-Dry™ System is complemented by a Pneu-Con Dessicant Dryer, a drying hopper, loading method of choice (see Available Loading Options), a portable cart to support the above items, and miscellaneous interconnecting hardware.

Available Loading Options are:

- ✓ Compressed Air Powered Eductor.
- ✓ Self-Contained Whisper Loader.
- ✓ Or, as a part of a central powered system.
